Title: Rationalises fluid use

Rationalises fluid use

Batoyle Freedom Group says manufacturers using its Solmaster K Plus have been able to rationalise cutting fluid consumption thanks to its versatility and economies in use.

Solmaster K Plus is a high performance, long life, bio resistant, ultra stable semi-synthetic soluble cutting fluid which can be used in a wide range of metalworking applications. The formulation is based on sophisticated additive technologies which are said to ensure improved production efficiency and reduced machine downtimes.

It is possible to rationalise the number of cutting fluids being used in a workshop by using Solmaster K Plus. Its versatility means it can be used on a wide range of materials such as mild steels, stainless steels cast iron and a variety of non-ferrous metals.
